

Consider this quote: "Biology is the only science where multiplication and division mean the same thing".

Instructions: Using the quote above, complete the table below.

(What does the quote say? What does the quote mean? Why does the quote matter?)

SAY What does the quote say? Direct quote, paraphrase, or summary.	MEAN What does this quote mean? Make an inference. Interpret and "read between the lines." • What does the author mean? • How can the information be interpreted? • What can be inferred? • What point is the author making?	MATTER Why does it matter? So what? What are the implications and/or possible outcomes? • Why does this information matter? • Why is this important or significant? • What are the implications or consequences of the information? • How does this connect to other ideas?
	• <i>This quote means that...</i> • <i>This quote can be connected to the topic of ____ in Biology because _____.</i>	• <i>Knowing this...</i> • <i>This information matters because...</i> • <i>This connects to other ideas in Biology by...</i>
<i>Example answer:</i> <i>"Biology is the only science where multiplication and division mean the same thing".</i>	This quote means that during cellular division, one parent cell divides into two daughter cells. This increases the number of cells overall, which is a division of the original cell and a multiplication of cells. Therefore, multiplication and division are happening at the same time!	This quote connects the basics of mitosis to the overall production of body cells. In order for our bodies to function properly, body cells must be continuously made through mitosis. This could also be connected to meiosis, which is the splitting of parent cells into gametes.
