

Consider this quote: "Biology is the only science where multiplication and division mean the same thing".

Instructions: Using the quote above, complete the table below.

(What does the quote say? What does the quote mean? Why does the quote matter?)

SAY What does the quote say? Direct quote, paraphrase, or summary.	MEAN What does this quote mean? Make an inference. Interpret and “read between the lines.” • What does the author mean? • How can the information be interpreted? • What can be inferred? • What point is the author making?	MATTER Why does it matter? So what? What are the implications and/or possible outcomes? • Why does this information matter? • Why is this important or significant? • What are the implications or consequences of the information? • How does this connect to other ideas?
• It means that cell division doesn't make fewer cells; instead, it is _____ the total number of cells. • The quote highlights how biological growth happens through _____. • This quote says that in biology, _____ and _____ mean the same thing. • The quote is saying that when cells divide, they actually _____.	• This quote means that... • This quote can be connected to the topic of _____ in Biology because _____. • This quote means that when cells divide, _____. • In biology, division leads to _____.	• Knowing this... • This information matters because... • This connects to other ideas in Biology by... • This matters because _____. • Understanding this helps us learn how _____.
This quote says that in biology, multiplication and division mean the same thing meaning both words are interchangeable when talking about mitosis.	This quote means that when a cell divides through mitosis it is multiplying and becoming more cells. The cell multiplies in number but to do that a single cell must be divided.	This helps us learn that sometimes context can change the meaning of a word. I find it interesting that the same words when used to talk about different topics can mean two completely different things. Or how two completely different words could mean the same thing in different contexts.
